Integral engineering

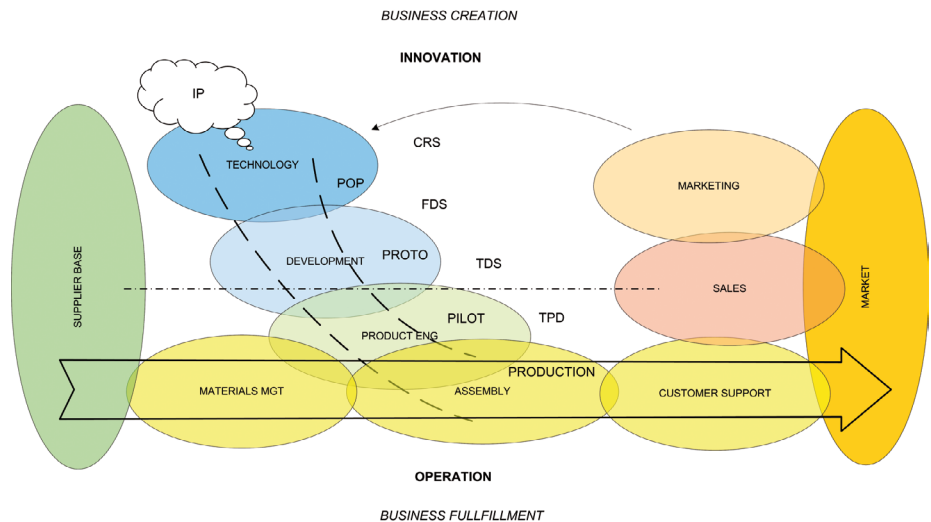

GreenTech Engineering is a company based on Integral Engineering, driving innovation into operation. Greentech Engineering approaches the operation challenges in high-tech industry through combined application, process, production and equipment engineering. Key is our focus on manufacturing technology and the production processes. By these competences and directed through profound project management Greentech Engineering is able to balance and accelerate the circle of innovation and operation sustainable and at high speed.

The difference and dispute of development characteristics and production environment is unfortunately inevitable. Innovation and innovative people are always on the edge looking for change, for new combinations and exploring technologies. Their drive for experimenting and effectiveness in meeting the best solution possible is continuous and never-ending. Meeting customer demands by surpassing competition, guaranteeing revenue and prosperity in the future.

Production methodology and production oriented people though are always looking for quality control, cost and efficiency. It is their passion to focus and to get grip on product quality, process technology, supply chain, production management and cost structures; making them efficient and lean; driving operational excellence and leveraging gross margin at the end of the day.

Finding middle ground and right attitude between Innovation and Operation is the key competence of Greentech Engineering. Orchestrating the product generation or creation process into reality by applying the right mix of 'change' and 'control'. This is what we call 'Integral Engineering'. Starting with Product and Application Engineering, making sure customer needs are fully addressed. Sound Equipment Engineering and Production Engineering methods and methodology like 'six sigma' and 'lean' setting the standards for sustainable reproduction and market fulfillment at the right time, the right quality and at the right costs.

Company profile

The company is offering engineering services, project realization, specific equipment and turn-key commissioned production solutions. Market approach is two sided supporting and integrating both the OEM business and the supplier base. Supplier base can be 1st tier system suppliers or specific technology suppliers with expertise in manufacturing technology. Greentech Engineering is able to apply specific manufacturing technology into the market by application and specific equipment engineering.

Driving innovation into operation

The organization is based on key employees with profound and decades of experience and knowledge in innovation and manufacturing. This core is connected to a group of well-known and competent specialists applicable for specific know how and expertise.

For building prototypes a network of swift engineering companies are available in the Eindhoven region. Also flexible high-tech resources are being contracted on project basis from case to case. At all times the company will fully manage and direct the customer requests and project execution. Services will be rendered through process investigations, projects, specific process equipment engineering and turn-key commissioned production solutions. The company is positioned in 'Brainport', having a footprint and strong ties in regional high-tech industry environment in the Netherlands
