Technobis Group is a developer and supplier of high-tech instruments and modules for OEM companies around the world.

The combination of technologies found within the Technobis Group and the Technology Platform formed with partners is absolutely unique. Working within this platform ensures fast response, high flexibility and optimal solutions for complex multidisciplinary and interdisciplinary challenges.

The unique combination of technologies makes it possible to develop instruments in very diverse markets:

- Life science
- Bio technology
- Solar cell
- Medical
- Hightech industry
- Aerospace
- Robotics

The Technobis Group is composed of two companies:

### Technobis Mechatronics

Technobis Mechatronics ([www.technobis.com](http://www.technobis.com)) is specialized in carrying out complete development trajectories to come from an idea to a successful turn-key special product, prototype or series product. More than 14 years of experience has brought us to the level of being a supplier of mechatronic systems for many companies in various markets. The main market focus of Technobis Mechatronics is on the medical, life science and solar market.

Technobis Mechatronics successfully operates in the solar market for several years now. Technobis Mechatronics is a supplier of handling systems for silicon solar cells and is specialized in handling silicon solar cell wafers at high speeds (one wafer per second) in harsh environments as high temperature (1000 °C) and vacuum environments. Also systems used to handle peripherals for the manufacturing of silicon wafers at high temperatures have been developed and delivered by Technobis Mechatronics.

Next to its activities in the solar market Technobis Mechatronics has teamed up with

customers and partners to develop new applications in various markets. This resulted in, amongst others, taking the first steps in a new medical application in which radiation treatment is combined with Magnetic Resonance Imaging (MRI). This application has to result in a solution which improves the accuracy of local radiation treatment.

Using the experience and expertise of Technobis Mechatronics, customers were and are able to realize hightech mechatronic solutions which proved to be a key contribution to the realization of their business cases.

### Technobis Fibre Technologies

Technobis Fibre Technologies ([www.tft-fos.com](http://www.tft-fos.com)) is a company within the Technobis Group and is specialized in the development and supply of total solutions in high-speed and multi-sensor fibre interrogators and sensors. Key product of Technobis Fibre Technologies is the high speed Deminsys interrogator for fibre bragg grating sensors.
